Dr. John Fischer is a board-certified diagnostic and interventional radiologist with a certificate of added qualification (CAQ) in interventional radiology. He utilizes the latest UFE techniques, including proprietary pain control protocols, and tailors them to each individual patient. Nothing is more important to him than doing what is best for the patient.

A third generation Houstonian, Dr. Fischer returned to the city after graduating from UT Austin with high honors. He attended Baylor College of Medicine in Houston, returning home again after completing his diagnostic radiology residency at the University of Washington in Seattle, where he served as chief resident. He completed his training with an interventional radiology fellowship at UT MD Anderson Cancer Center.

Since 2000, Dr. Fischer's noteworthy career includes private practice and associate professor of radiology at the Baylor College of Medicine. He also served as a principal investigator in UFE trials and studies, making him a true pioneer in UFE techniques. He joined Fibroid Institute Houston in 2022, bringing years of experience, knowledge, skill, and collaborative relationships within the Houston medical community.

A self-claimed perfectionist, Dr. Fischer also credits his father's influence for his work ethic, discipline, and dedication. He has maintained a personal, practical, "down to earth" and often witty approach to his practice of medicine. He loves to share stories, smiles and laughter with his patients and staff as he believes this is a great place to begin the healing process.

When not helping patients, Dr. Fischer devotes most of his time to his wife, Lisa, and their four children. He also enjoys most everything sports, cooking and traveling.
